## GUINEA GOLD MARIGOLD

These little pictures are just to show the color. Guinea Gold Marigold flowers are much larger—2½ in. across, on long, strong stems.

Guinea Gold is a glorious new and distinct Marigold with many superior features. The graceful blooms, 2 to 2½ in. across, with dainty, waved, Carnation-like petals of rich intense orange flushed with pure gold, resemble Giant Carnations more than Marigolds. Very prolific—the best of all Marigolds for cutting. The blossom-covered plants make the most beautiful show in your garden, growing 2 to 2½ feet high. Pkt. 15¢.

**GOOD NEWS!** We want every Maule customer to enjoy this lovely new flower, so we will send you, with your order, a regular full-size packet as a gift, absolutely free.

## Maule's BLOOD TURNIP BEET

66 Maule's Blood Turnip Beet is the most uniform in shape and size of any we have ever grown. The color is the deepest red, and the flesh is unusually sweet and tender. This is not a new variety, but one that has produced profitable crops for our Gardening Friends for many years. Matures early, usually in about 50 days, and has a rich, dark red skin and blood-red flesh, with hardly any zone. The uniformity in size and shape is truly remarkable. Perfectly globe shaped and always smooth. Quality is always the best. This is truly an all-season variety, as it may be grown for spring or summer use, for canning or for winter storing. Pkt. 10¢; oz. 20¢; ¼ lb. 50¢; ½ lb. 80¢; lb. \$1.35.

Maule's Blood Turnip Beet justly bears the Good-Luck four-leaf clover emblem, an old tradition that has pointed out Maule's choicest varieties for many years.

The Old Reliable Seed House

1934

To all our Friends:

Before spring comes there will be a million people reading Maule's Seed Book. Why?

Because all these farmers and gardeners (including you) want to have a better garden than they had last year. A million Americans know that there is no better way to have a better garden than to study the Maule Seed Book.

We are glad to send you this book. We hope you will read it carefully and allow us to supply you with your gardening needs.

We know a good deal about seeds, and it is our business to serve you. May we benefit you with our experience by supplying you with seeds of the highest quality at lowest prices. No matter how much you pay you cannot buy better seeds than Maule's.

## — NO INCREASE IN PRICES —

### We Do Our Part

The Old Reliable Seed House was among the first to "do our part." We have raised wages and have shortened working hours, helping to relieve unemployment by taking on more help. We are cooperating in every possible way to make things better for everybody—higher prices for the farmer as well as higher wages for industry, but no increase in the price of Maule's vegetable and flower seeds.

### For Your Convenience

We have placed an order form at the end of this book. By using it you will help us to fill your order promptly and accurately. Kindly fill out the form completely for each item or collection desired. Send Check, Money Order, U. S. Stamps or Cash, whichever is most convenient for you. If you wish to have your seeds or bulbs sent C. O. D., kindly remit  $\frac{1}{4}$  of the amount with your order.

Last year we gave our customers better seeds than ever at the *lowest prices in history*. In spite of increased expenses we are offering our vegetable and flower seeds this year at the *same low prices* as last year,—some even lower. There is no increase in price anywhere in this book, except on Onion Sets, Potatoes, and some varieties of Farm Seeds where it has been absolutely necessary. Maule's standard of quality is higher than ever before. Our big business makes it possible for us to sell the best seeds at the lowest prices.

### We Guarantee

All goods shipped by us to reach you in good condition. To refill your order or refund, anytime within the year, the full amount paid us for Seeds, Bulbs, or Roots, if you are not satisfied with the results. Of course we do not guarantee your crop and cannot be responsible for any amount beyond the sum you actually pay us for Seeds, Bulbs, or Roots.

**M**AULE'S seeds are tested for purity and germination. We spend thousands of dollars annually in testing and breeding seeds so that Maule's customers will have the best. There may be other seeds as good as Maule's, but there are absolutely none better.

**A**GARDEN makes living worth while. A garden is the greatest and yet the least expensive recreation. Plant some new flowers and vegetables this year. You will be proud of them and enjoy them.

**U**P TO 10 pounds of each kind of seed listed in our seed book will be shipped to you at our expense. We pay the postage and guarantee safe arrival.

**L**ARGE orders or small orders are all filled promptly and carefully. Your seeds are on the way to you within 24 hours after your order is received. The word "Maule" has stood for prompt and accurate service for 57 years.

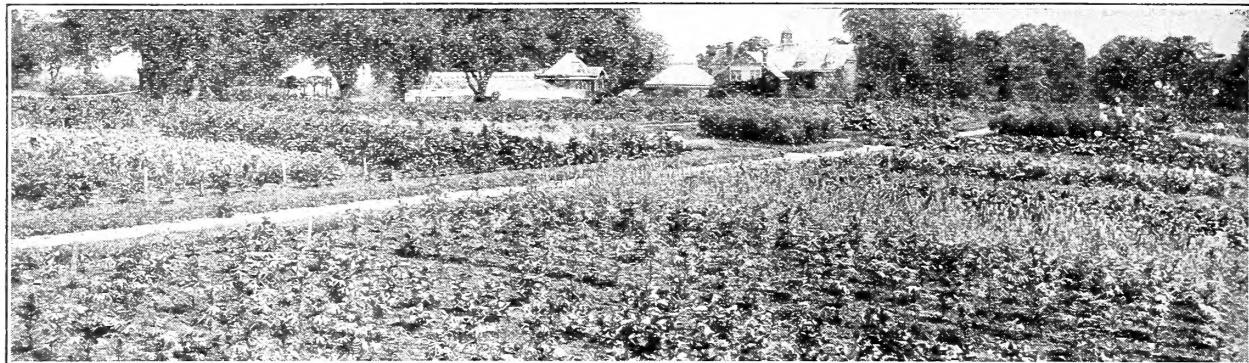

**E**VERY customer receives a full size packet of the beautiful new Marigold "Guinea Gold" as our goodwill gift to you for 1934. This is one of the finest of garden flowers and we want you to have it. (See opposite page).

**S**eed values were never greater than now, and nowhere will you find greater values than in Maule's Seed Book. Our prices are low, but our standard of quality is higher than ever before.

# Maule's Best Vegetable Seeds

*Garden of Vegetables and Flowers Produced from Maule's Seeds and Plants*

## Growing Bumper Crops from Maule's Seeds

Nothing is of greater importance to the grower of vegetables than the quality of the seed he sows. Even the most skeptical must realize that no house could exist for over 55 years unless it was giving full satisfaction to its customers. You know that we guarantee "your money back if not satisfied." This has been our slogan for years. The reason why we are able to make this guarantee is because "no better seeds than Maule's can be had at any price."

We know this to be the fact through the trials we make every year. Few people have any idea of what these trials mean to them. There is no other way of insuring our customers of the highest quality seeds but by actual tests. Each strain is carefully compared with all other leading strains of the same variety in existence.

Though we recommend that you stick to the good old sorts with which you are acquainted, we nevertheless suggest that you try some of the newer varieties which, in almost every case, represent an improvement in one way or another. In this way you will become acquainted with what is new and determine for yourself whether it fills your needs. To help you in selecting the varieties best suited for your purpose we not only give full description but we also indicate the number of days required by the crop from the time the seed is sown until it is ready for use. These dates must necessarily be approximate since weather and soil conditions have a great influence upon this factor. As the dates are all relative you can easily determine which varieties are early and which are of late maturity.

### Promptness

Maule's pride themselves on the rapid handling of orders, which as a rule are shipped same day as received. Early orders, before the rush of March and April, will help us serve you even more promptly.

### Accuracy

Maule again points with pride to the very efficient manner in which all orders are filled. Mistakes seldom occur, but if everything is not in accordance with your wishes, we hope you will let us know at once.

### Satisfaction

Maule's "Guarantee" on Page one insures complete satisfaction in every way.

### MAULE'S FOUR LEAF CLOVER

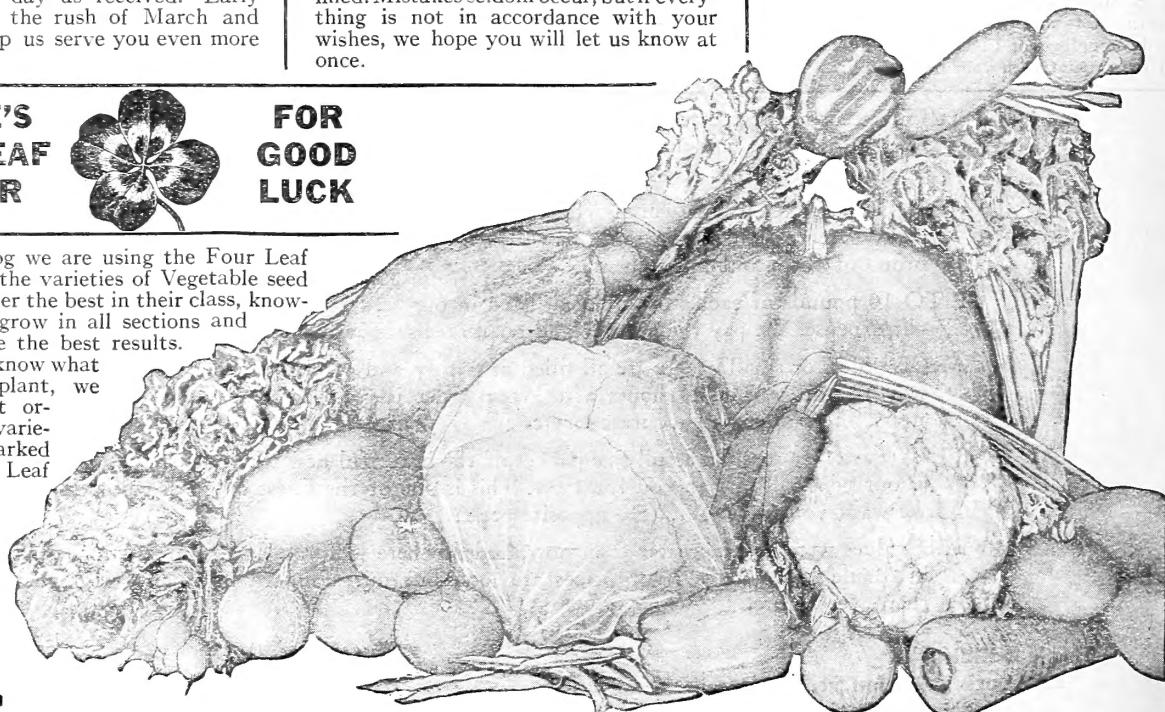

### FOR GOOD LUCK

In this Catalog we are using the Four Leaf Clover on all the varieties of Vegetable seed that we consider the best in their class, knowing they will grow in all sections and soils, and give the best results.

If you do not know what varieties to plant, we would suggest ordering such varieties as are marked with the Four Leaf Clover.

### *A Planting Calendar of Flowers —*

## *For Better and Brighter Gardens*

### **Including the Newest Introductions and all the Old Favorites**

This planting calendar of flowers will help you to determine what you can plant every month during the growing season. There are many gardeners who do not realize that flower seeds can be planted all during the spring, summer, and fall. Take advantage of the opportunity to provide for a continuous display of a wide variety of flowers from early spring until late in the fall. For an extra early display, quite a few of the annual flowers may be started indoors during February, March, or April in boxes filled with fine soil.

### **Sow During June**

Nearly all flowers listed for April and May planting will give satisfactory results if sown during this month. June is ideal also for sowing perennial seeds in a special seed bed. The plants will be of good size for setting in a permanent place the latter part of August or September. You can also still start your lawn during June providing you can water it regularly during the hot summer months.

Naturally, the planting dates which we have given will vary somewhat with different locations. Those recommended for planting outdoors during April are all hardy annuals or perennials which may be sown as early in the spring as the ground can be dug and prepared for planting. The list of classes given for planting during May represent tender plants which cannot be sown until all danger of frost has passed and the nights have become moderately balmy. And you will likely be surprised to see how many annual seeds can be sown in late fall.

### **Sow During July**

Quick growing annuals may be sown during July and still make a fine show later in the season. They include Ageratum, Sweet Alyssum, California Poppies, Larkspur, Petunias, Phlox, and others. Of course, care must be taken to water them thoroughly while the weather remains dry. It is still a good time to start perennials in a specially prepared seed bed in a half-shaded location. If natural shade is not present, shade with a grill-like device which is easy to make from thin laths. Rest it on stakes 6 in. above soil level.

### **Sow During August**

In sections where summers are relatively long, seeds of perennials can still be sown for plants which will be strong enough to live through the winter and produce their flowers the following year. They should be given a light winter protection of long straw or other materials which will not pack down heavily. It is now time to consider your planting of fall bulbs.

### **Plant During September**

Dutch bulbs, such as Tulips, Hyacinths, Narcissus, Crocus, and others. Also prepare your ground for Lily bulbs, many of which should be planted now and up to the middle of December. It is a good time now to start a lawn in sections with long growing seasons and mild winters.

### **Plant During October**

All the bulbs mentioned for planting in September as well as perennial plants, hardy climbers, etc., may be planted to advantage during this month. Fall sowing of hardy annuals should be made the latter part of October or early in November. These will bloom early the following year.

## Artichoke

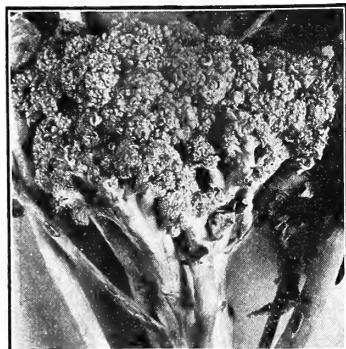

### 2 Green Globe

Large, Productive, Choice Quality

This is the standard variety grown extensively for its buds or flowerheads which are highly esteemed in all the better class markets. They are a decided delicacy. Seed may be sown indoors, setting the plants outdoors, after all danger of frost is past, in rows 4 ft. apart and allowing 2 ft. between the plants. The plants are hardy, requiring winter protection in colder sections. They begin to produce with the second season and yield heaviest during the first two or three years. Pkt. 15c;  $\frac{1}{2}$  oz. 30c; oz. 45c;  $\frac{1}{4}$  lb. \$1.40;  $\frac{1}{2}$  lb. \$2.60; lb. \$4.75.

#### SPECIAL OFFER

You may select any three 10c packets for 25c, or six 10c packets for 50c, or thirteen 10c packets for \$1.00, of either flower seeds or vegetable seeds, or both if you wish.

105 Calabrese Broccoli

## Broccoli

### 105 Calabrese

Italian Green Heading or Sprouting

(90 days) This vegetable has become extremely popular within recent years. The variety which we offer forms a good size, rich green head during June or July, and after it is cut side branches will develop, each carrying smaller size heads of choice quality. This type has proven decidedly more popular than the open spreading varieties which are not nearly so tender nor as tasty as our special strain of Calabrese. One packet produces 250 plants; 3,000 plants to the ounce. Pkt. 15c;  $\frac{1}{2}$  oz. 25c; oz. 45c;  $\frac{1}{4}$  lb. \$1.35;  $\frac{1}{2}$  lb. \$2.45; lb. \$4.50; 2 lbs. \$8.35; 5 lbs. \$20.25.

### 103 Early Angiers

Also Known as Winter Cauliflower

(150 days) This Broccoli is the white heading type which can hardly be distinguished from Cauliflower though it requires considerably longer time to come to maturity. It is more hardy than Cauliflower, and is grown in the Northwest for shipping to our eastern markets. Very productive and of choice quality. In sections where Cauliflower does well, we advise planting Cauliflower only. Pkt. 15c;  $\frac{1}{2}$  oz. 30c; oz. 50c;  $\frac{1}{4}$  lb. \$1.50;  $\frac{1}{2}$  lb. \$2.75; lb. \$5.00.

## Asparagus

*Culture*—Sow the seed early in the spring in drills an inch apart in the row and 2 to 3 ft. apart between the rows. Firmly cover the seed with one inch of fine soil. As soon as the young plants appear, begin shallow cultivation and keep free from weeds at all times. A packet will produce about 200 plants; one ounce about 750 plants; 4 to 5 lbs. of seed is needed per acre.

Asparagus roots should be planted in rows not less than 2 $\frac{1}{2}$  ft. apart, therefore requiring 100 roots for a patch 20 by 20 feet; 5,000 to 7,000 roots are needed to plant one acre.

### 4 Mary Washington Rust-Resistant

The Newest Creation in Asparagus

A most remarkable Asparagus that has replaced all other varieties because it is practically free from rust and other diseases, yet it makes larger, thicker, and more uniform shoots of a beautiful rich green color with a heavy shading of rich purple at the tips. The tips or buds are pointed and tightly folded and do not branch out until well beyond market height. Makes a clean, sturdy growth and produces the finest kind of green asparagus for both home use or market. Our strain of this foremost asparagus is unexcelled in every way. Pkt. 10c; oz. 15c;  $\frac{1}{4}$  lb. 30c;  $\frac{1}{2}$  lb. 50c; lb. 80c; 2 lbs. \$1.45; 5 lbs. \$3.40; 10 lbs. \$6.00.

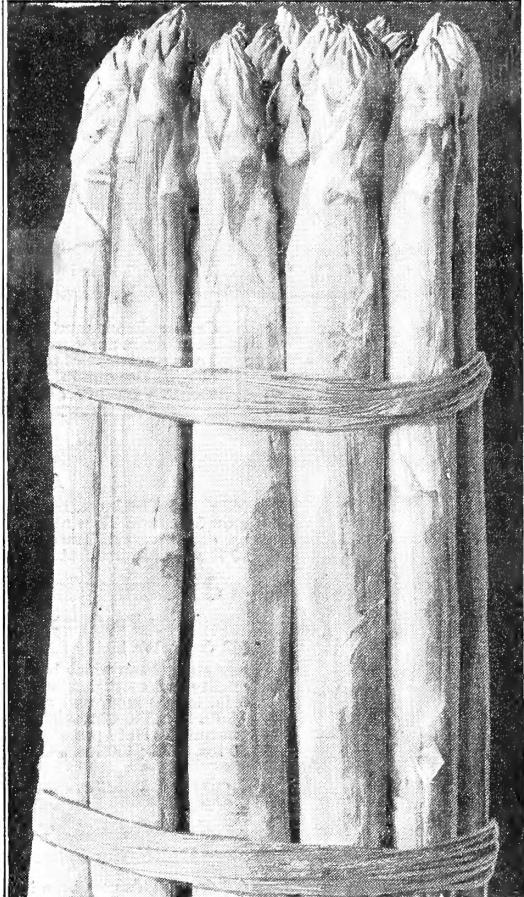

### 69B56 One-year-old Roots

## Brussels Sprouts

### 108 Danish Prize

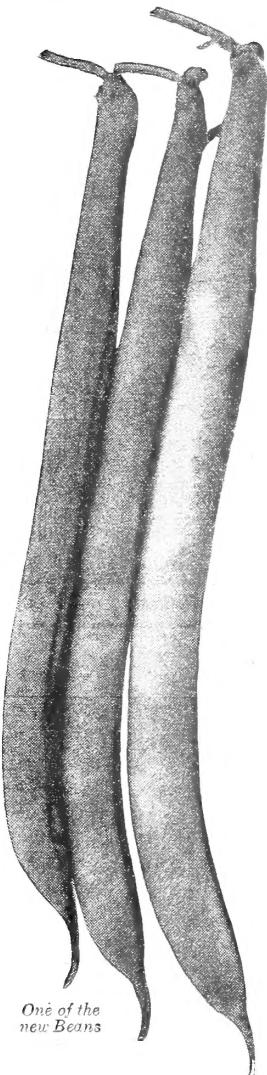

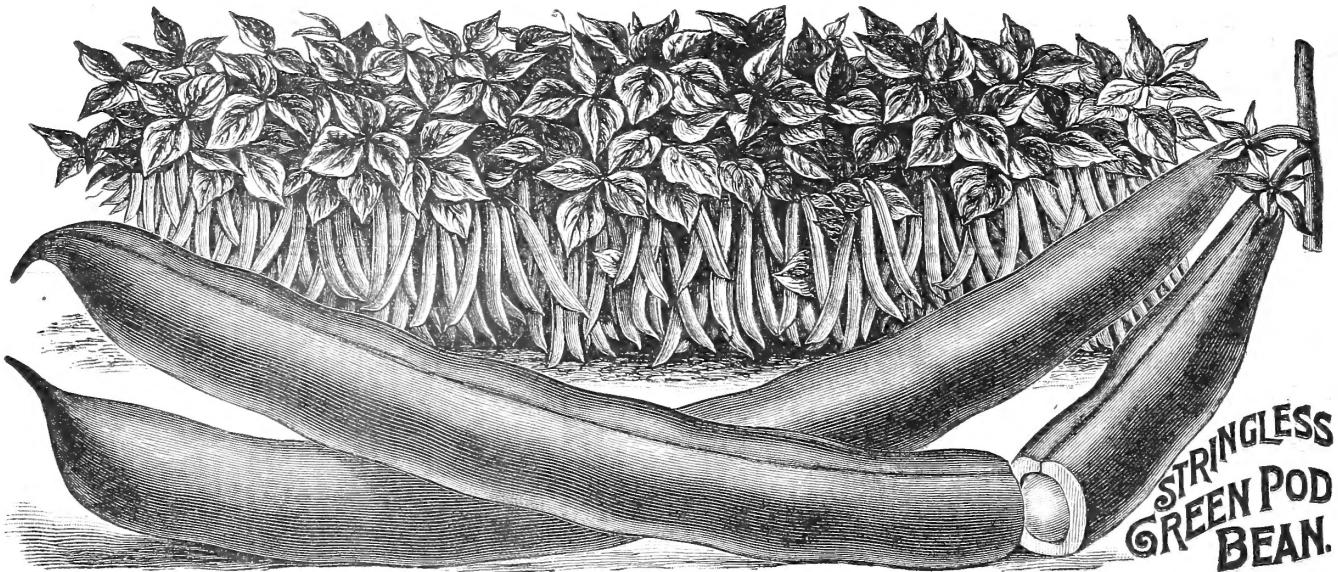

Compact, Miniature Cabbages Closely Set Along the Stem

(125 days) Brussels Sprouts is a delicious vegetable belonging to the cabbage family but it excels cabbage in mildness and sweetness. It should be more largely grown in the home gardens as it supplies the table with fresh green sprouts in the late fall and winter. The plants are medium-tall, producing an abundance of large yet solid dark green, tightly folded sprouts of choicest quality. Grow it in moderately rich soil to avoid an excess of leaves. Sow the seed in April or May in the open ground. Transplant in rows 3 ft. apart and 18 in. in the row. Break off the leaves along the stem to aid the formation of the small heads. A packet gives about 300 plants and an ounce is sufficient for 3,000 plants. Brussels Sprouts is grown mostly for winter use, and as the plants are quite hardy they are allowed to remain in the garden until after frost. In fact, the flavor of the young sprouts is greatly improved after they have been frosted. Pkt. 10c; oz. 20c;  $\frac{1}{4}$  lb. 65c;  $\frac{1}{2}$  lb. \$1.00; lb. \$1.75; 2 lbs. \$3.20; 5 lbs. \$7.70.

## 74 Eclipse

**Flesh Bright Purplish Red, Zoned with a Lighter Shade**

**(45 days)** A splendid early variety grown extensively in the home garden and a favorite in certain market growing sections. Its early maturity represents a desirable factor for both classes of gardeners. As it grows quickly, the flesh is fine grained and tender. The roots are a flattened globe shape with smooth, evenly colored skin, and free from rootlets. The tops are small and of a bright red color. The medium size roots are of attractive appearance and look very well when prepared for the table. The flesh is bright red showing zones of a pinkish white color. Very attractive when canned as the dark red color lasts well. Pkt. 10c; oz. 15c;  $\frac{1}{4}$  lb. 40c;  $\frac{1}{2}$  lb. 60c; lb. 95c; 2 lbs. \$1.70; 5 lbs. \$4.05; 10 lbs. \$7.10.

## 72 Ohio Canner

**Very Dark Blood-Red Flesh with Scarcely any Zones Retains its Color Very Nicely After Canning**

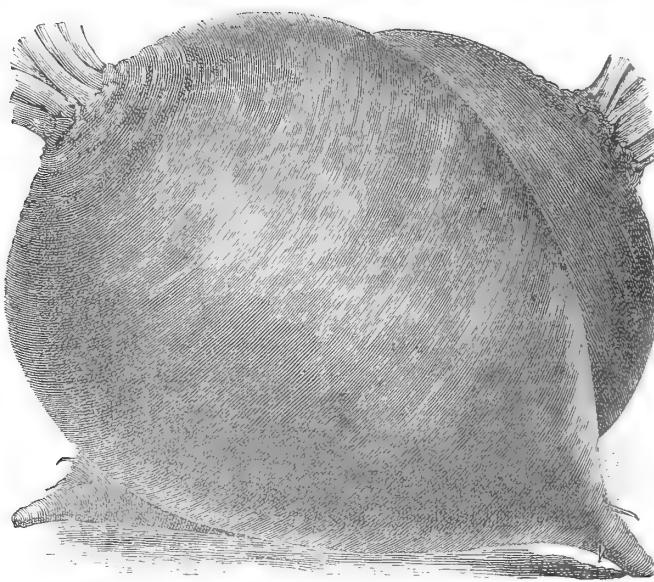

**(60 days)** While this variety has been improved principally for the purpose of canning, it nevertheless represents a most valuable variety for home gardeners and market growers who cater to a select market. The shape of the beets is round or slightly flattened. The foliage is reddish green and somewhat smaller than that of Detroit Dark Red. The very dark red skin is exceptionally smooth. The color of the flesh is the darkest of any beet of this type showing hardly any zones at all. This is a beet that will remain tender and sweet all summer and well into the late fall. Whether young or old, small or large, they are always tender and sweet. Although a comparatively new variety, this beet is already grown in all parts of the country. Pkt. 10c; oz. 20c;  $\frac{1}{4}$  lb. 65c;  $\frac{1}{2}$  lb. \$1.00; lb. \$1.75; 2 lbs. \$3.20; 5 lbs. \$7.70; 10 lbs. \$14.00.

## 91 Edmand's Early Turnip Beet

Bright Purplish Red Color; Turnip Shaped; Tender, Fine Grained and Sweet

(45 days) Many gardeners swear by this excellent, quickly maturing variety. It is indeed a most desirable turnip-shaped beet with deep blood-red skin and flesh. It has a short top which makes close planting possible. The roots are almost round and at times taper off at the base into more of a turnip shape. The flesh is bright, purplish red showing a little zoning of a somewhat lighter color. In fact, the inside of this beet is so uniform in color that it seems to be solid red. It has established itself firmly in certain market-growing sections, and it is also highly valued by many home gardeners who appreciate its fine, tender-grained flesh and rich sweetness. Pkt. 5c; oz. 10c;  $\frac{1}{4}$  lb. 30c;  $\frac{1}{2}$  lb. 45c; lb. 75c; 2 lbs. \$1.35; 5 lbs. \$3.20; 10 lbs. \$5.00.

## 77 Crosby's Egyptian ♀

Medium Size Tops, Roots Flattened Globe Shape With Small Tap Root. Flesh Deep Red, Zoned Lighter

(42 days) Our strain of this quality beet is a decided improvement on the older forms of Egyptian beet and we claim there is no better early garden beet. The roots are larger and more globular though still somewhat flattened at the top, representing more or less of a turnip shape. The skin is a very deep red and the flesh is somewhat lighter in color. The foliage is quite short so that by close planting the yield from a given area can be considerably increased. Market gardeners will find this an ideal variety for bunching. Pkt. 10c; oz. 15c;  $\frac{1}{4}$  lb. 30c;  $\frac{1}{2}$  lb. 50c; lb. 85c; 2 lbs. \$1.55; 5 lbs. \$3.60; 10 lbs. \$6.35.

## 70 Maule's Early Wonder Table Beet ♀

Extremely Early, Deep Red Roots; Tender and Sweet (40 days)

This early beet is the result of yearly selection made over a long period of time. As we offer it today it seems almost impossible to still further improve its appearance and excellent quality. The roots are of turnip shape, of a beautiful deep red color, and of medium size. This characteristic makes it possible to grow them quite close and thereby increase the yield from a given area. Equally desirable for home garden planting as for market. Pkt. 10c; oz. 15c;  $\frac{1}{4}$  lb. 30c;  $\frac{1}{2}$  lb. 50c; lb. 85c; 2 lbs. \$1.55; 5 lbs. \$3.60; 10 lbs. \$6.35.

## 78 Crimson Globe ♀

Medium Size, Globe Shaped, Small Foliage

78 Crimson Globe

(41 days) A handsome beet of medium size which received its name from the uniform globe shape of the roots. It is entirely free from rootlets which enhances the good appearance of the roots. For a second early variety it is hard to beat. The foliage is small which makes it suitable for forcing under glass. The flesh is rich blood-red with somewhat lighter zones. Always at its best either when young or old. Pkt. 5c; oz. 15c;  $\frac{1}{4}$  lb. 40c;  $\frac{1}{2}$  lb. 60c; lb. 95c; 2 lbs. \$1.70; 5 lbs. \$4.05; 10 lbs. \$7.10.

## 84 Detroit Dark Red ♀

A Highly Bred, Globe Shaped Beet for Home or Market

(50 days) We offer a special strain of this famous home garden and market grower's beet. It excels in uniformity of size, shape, and color, being suited for home use, market sales, storing, shipping, and canning. The roots are of medium size, smooth, perfectly globe shaped, and of generally good appearance. The color of the flesh is a most intense deep red, showing no signs of any zones after cooking. It remains tender throughout and free from fiber until fully grown. A steady demand from the same people year after year is proof that this is the beet to grow. Our seed will produce uniform fruits that excel in color and firmness as well as in quality. The tops are small, which not only permits close planting but makes it ideal for bunching. Pkt. 10c; oz. 15c;  $\frac{1}{4}$  lb. 30c;  $\frac{1}{2}$  lb. 50c; lb. 85c; 2 lbs. \$1.55; 5 lbs. \$3.60; 10 lbs. \$6.35.

## 67 Maule's Alpha ♀

**Dark Crimson Color,  
Uniform Size and  
Splendid Quality.  
Fine for Home Garden  
and For Canning**  
(40 days)

We regard this as an exceptionally fine beet with large roots of even size and splendid quality. Its shape is that of a turnip; just a little deeper than Crosby's Egyptian.

The flesh is dark crimson with slightly lighter zones or rings. As the top growth is small it stands close planting very well. Its attractiveness and earliness have made it a great favorite with many. It is undoubtedly one of the best Market Beets. When cooked it has a rich sweet flavor and it is entirely free from any fiber or toughness. Equally fine for immediate use or for canning. Pkt. 10c; oz. 20c;  $\frac{1}{4}$  lb. 50c;  $\frac{1}{2}$  lb. 75c; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50; 10 lbs. \$10.00.

Early Maturing; Roots Round-Flattened; Heavy Yielder; Firm Sweet

Dark Red Flesh

(40 days) No other beet can replace this well established variety for earliness. Under favorable conditions the roots grow quickly and reach full size in an astonishingly short time. This characteristic of quick growth has made Maule's Dark Red Egyptian a favorite variety with many market growers who plant it extensively for forcing to supply the early market. As the roots are of medium size and have only a limited amount of foliage, they can stand quite close planting which, in turn, means increased yields from the land available. The compactness of the plant is only one of the features that has made it valuable for growing under glass. Its quality, attractiveness, uniformity, and the dark red color of the flesh are characteristics that will appeal to many gardeners. Cooks sweet, tender, and crisp, retaining its bright red color nicely and is very desirable for pickling. On account of its extremely early maturity, two crops can often be harvested in one season on the same piece of land. You will find a ready sale for any surplus you may raise. Pkt. 10c; oz. 15c;  $\frac{1}{4}$  lb. 30c;  $\frac{1}{2}$  lb. 50c; lb. 85c; 2 lbs. \$1.55; 5 lbs. \$3.60; 10 lbs. \$6.35.

## 90 Mixed Table Beets

One Planting will Give an Ample Supply All Summer

(35 to 65 days) Those who want just a row or two of beets for their own use and want their crops spread over as long a period as possible will find this mixture ideal for their purpose. It contains all varieties of table beets we offer and is a most desirable way to grow beets, particularly when space is limited. Pkt. 10c; oz. 15c;  $\frac{1}{4}$  lb. 40c;  $\frac{1}{2}$  lb. 60c; lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00.

## 94 The Jumbo ☺

It requires a well prepared top soil of moderate fertility and a good long season to reach full size. A great favorite in many stock farming sections. Pkt. 5c; oz. 10c; 1/4 lb. 25c; 1/2 lb. 35c; 1 lb. 50c; 2 lbs. 90c; 5 lbs. \$2.00; 10 lbs. \$3.75.

**The Earliest, Largest, and Surest Header of any Cauliflower we have Tested (90 days)**

We consider this at the top of the list as the earliest, finest, and most attractive cauliflower. Every plant produces a head. It is a sure header whether planted for forcing in frames or grown outdoors for either early or late crop. The heads mature all at about the same time. The growth of the plants is dwarf and compact so that the plants can be set as close as 18 in. apart in the frame or field. Such close planting naturally means a greatly increased yield from a given space of ground. It is particularly desirable for forcing under glass. The compact, perfectly white, closely formed heads are most attractive and are sure to bring a high price in the market. Pkt. 25c;  $\frac{1}{4}$  oz. 90c;  $\frac{1}{2}$  oz. \$1.50; oz. \$2.70;  $\frac{1}{4}$  lb. \$8.10;  $\frac{1}{2}$  lb. \$14.85; lb. \$27.00.

## 165 Dry Weather

**Forms Perfect Heads When All Other Varieties Fail to Produce a Crop (105 days)**

This foremost cauliflower originated in Denmark and is truly most outstanding since it will produce attractive, remarkably large heads during dry seasons when all other varieties of cauliflower will be a complete failure. It is a quality cauliflower in all respects. The closely formed, pure white curd is attractive and very tender. Though it grows well in dry seasons, moist or wet seasons do not in any way harm it. It is an excellent home garden and market variety which we are sure will please you particularly well. Pkt. 15c;  $\frac{1}{4}$  oz. 75c;  $\frac{1}{2}$  oz. \$1.25; oz. \$2.30;  $\frac{1}{4}$  lb. \$6.90;  $\frac{1}{2}$  lb. \$12.65; lb. \$23.00.

Pkt. 25c;  $\frac{1}{4}$  oz. \$1.10;  $\frac{1}{2}$  oz. \$1.80; oz. \$3.30;  $\frac{1}{4}$  lb. \$10.00;  $\frac{1}{2}$  lb. \$18.25; lb. \$33.00.

## 168 Early Snowball

**Large, Solid, White Heads. A Sure Cropper (95 days)**

This standard cauliflower is known everywhere. It is a great favorite in the home garden and with market growers. Produces large, solid, white heads and does best in a moderately cool climate. The individual heads average about 9 in. in diameter though they will grow as much as 12 in. across under favorable conditions. Its earliness makes it also desirable for forcing under glass during winter and spring. Pkt. 10c;  $\frac{1}{4}$  oz. 75c;  $\frac{1}{2}$  oz. \$1.25; oz. \$2.30;  $\frac{1}{4}$  lb. \$6.90;  $\frac{1}{2}$  lb. \$12.65; lb. \$23.00.

# Maule's Golden or Yellow Sweet Corn

**Culture:** Plant the seed after all danger of frost is over and the ground has warmed up. Sow in rows 3 to 4 ft. apart. Cover the seeds about one inch deep. Space the seed 8 in. apart in the rows. The most popular method, however, for field planting is to drop 3 to 4 seeds in hills spaced either 3 by 4 ft. or 4 by 4 ft. Allow 2 to 3 plants to remain in each hill. In order to provide a continuous supply of good fresh corn, make succession plantings until about July 10. The final date of planting, of course, depends entirely upon your climatic condition. A packet of seed will plant four rows, each 25 ft. long;  $\frac{1}{2}$  lb. for 200 hills;  $12\frac{1}{2}$  lbs. per acre.

## Second Early and Main Crop White Varieties

### 205 Maule's Colossal Early ♀

We Claim That This Is The Finest Large Eared Sugar Corn In Existence

(70 days) When a variety of Sweet Corn not only holds its own for a period of over 22 years but its sales increase with every season, it simply must be good. While its days to mature have been given above as 70, we know of many instances where it has produced its first ears within 58 to 62 days after planting. Quality in Sweet Corn is, however, more important for its popularity than season of maturity. The ears are 7 to 9 in. long and frequently 2 to 3 in. thick with 12 or 14 rows of large sweet kernels that fairly melt in your mouth. The plants are 6 to 7 ft. tall, many of them carrying 2 to 3 ears on a stalk. Pkt. 15c;  $\frac{1}{2}$  lb. 25c; lb. 45c; 2 lbs. 85c; 5 lbs. \$1.55; 10 lbs. \$2.90, postpaid. ### 212 Maule's XX ♀

Possesses a Most Delicious Sugary Flavor

(68 days) This is one of our great specialties and we have carefully guarded its outstanding qualities to protect growers in getting, year after year, a corn of the same high quality. We have customers who have bought it from us in quantities ever since it was introduced many years ago. Again and again customers have written us that they consider it the most delicious, sugary Sweet Corn they have ever tasted. Even after the time when it is at its best has passed, it still is as sweet and delectable as many other varieties when at the height of perfection. The stalks grow 5 to 6 ft. high, producing large 12 to 16 rowed ears measuring 9 to 10 in. in length. Pkt. 10c;  $\frac{1}{2}$  lb. 25c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.45; 10 lbs. \$2.70, postpaid. ### 220 Early Evergreen

Narrow, Pure White Kernels of Excellent Quality

(70 days) This is a special strain which resembles Stowell's Evergreen in every way, except that it will mature full-size edible ears in 70 days, whereas Stowell's Evergreen requires fully 80 days to mature a crop. Many growers take advantage of these ten days so as to have the larger and attractive ears nearly as soon as the smaller ears of the earlier varieties. The plants grow 7 ft. tall and are very vigorous. Many of them bear two ears to the plant. The ears are 7 to 8 in. long. They are closely set with 16 rows or more of pure white, deep, moderately narrow grains of excellent flavor. Pkt. 10c;  $\frac{1}{2}$  lb. 25c; lb. 35c; 2 lbs. 55c; 5 lbs. \$1.15; 10 lbs. \$2.05, postpaid. Not prepaid: 15 lbs. \$2.25; 25 lbs. \$3.50; 50 lbs. \$6.50; 100 lbs. \$12.00.

### 210 Burpee's Delicious

Deep and Broad Kernels of Buttery Flavor

(70 days) Upon seeing the ears of this variety one is immediately impressed with their resemblance to those of Golden Bantam Sweet Corn, though the ears are considerably larger and the grains are of a beautiful, pure white color. This resemblance is not just superficial but due to the fact that it has been derived from Golden Bantam and has inherited not only the depth and breadth of the kernels but also a good amount of the wonderful flavor. 5 to 7 ft. high. Well protected by a strong firm husk is an ear measuring close to 8 in. in length with 12 or 14 rows of broad deep white luscious buttery kernels. Pkt. 10c;  $\frac{1}{2}$  lb. 25c; lb. 45c; 2 lbs. 85c; 5 lbs. \$1.55; 10 lbs. \$2.90, postpaid. Not prepaid: 15 lbs. \$3.45; 25 lbs. \$5.50; 50 lbs. \$10.50; 100 lbs. \$20.00.

The ears are 8 in. long and are thickly set with 16, 18, and often 20 rows of rather narrow wedge-shaped grains which are pure white and exceptionally sweet. An abundant and satisfactory yield. Equally valuable for family use, market, or shipping. Pkt. 10c;  $\frac{1}{2}$  lb. 25c; lb. 35c; 2 lbs. 60c; 5 lbs. \$1.25; 10 lbs. \$2.25, postpaid. ### 216 Country Gentleman ♀

Long and Slender, White Grains of Unusual Sweetness. Often Called Shoe Peg Corn

(80 days) The variety is easily recognized by the irregular arrangement of the kernels. The seeds also are quite distinct. Being long and narrow, the variety has earned the by-name Shoe Peg Corn. The ears are quite large, 7 to 8 in. long, with a small white cob thickly covered with long, slender, white grains of exceptional sweetness. The plants often carry as many as three ears which makes this variety a heavy yielder. Splendid for home, market, and canning. Pkt. 10c;  $\frac{1}{2}$  lb. 25c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.25; 10 lbs. \$2.25, postpaid. Not prepaid: 15 lbs. \$2.55; 25 lbs. \$4.00; 50 lbs. \$7.50; 100 lbs. \$14.00.

## 681 Pritchard or Scarlet Topper

### An Outstanding Wilt-Resistant Scarlet-Red Tomato

(110 days) When a new tomato receives as much comment as this variety there must be something about it that places it in a class by itself. This variety was bred by the late Mr. Pritchard of the Department of Agriculture in Washington, who succeeded most admirably in developing a prolific strain which produces large, solid fruits of an intense scarlet-red color. The tomatoes are round, perfectly smooth, and of handsome appearance; particularly desirable for shipping as the fruits are sound and extremely free from disease. Plants thrifty and productive and in fruit through a long season. If you have never grown the Pritchard, try it this year without fail. Pkt. 15c;  $\frac{1}{2}$  oz. 30c; oz. 45c;  $\frac{1}{4}$  lb. \$1.35;  $\frac{1}{2}$  lb. \$2.45; lb. \$4.50; 2 lbs. \$8.35; 5 lbs. \$20.25; 10 lbs. \$38.25.

Asters or China Asters, as they are often called, are easy to grow and give a wonderful display of large, showy blooms which are suitable for beds, borders, and for cutting. There are quite a few types to choose from, according to the arrangement and shape of the petals which compose the large double blooms, and there is also quite some difference in the blooming season. You may select early, mid-season, or late varieties to suit your particular purpose or, better still, plant some of each.

## Maule's Earliest Blooming

This is the earliest blooming type of all Asters with lovely, large, rounded blooms composed of moderately long, broad petals. The blooms are carried on medium stems, sufficiently long for cutting. Also very valuable for bedding. The plants grow 15 to 18 in. tall and bloom during June. Start the seed indoors during February or March and transplant out of doors as soon as the ground is warm and settled warm weather is assured.

## 1080 Peerless Pink

This is an Aster which takes its place with the finest of the American introductions. It is a vigorous-growing variety forming well rounded, much branched plants 2½ ft. tall. Each of the long, flexible stems carries a large, globular, round flower of a beautiful shell-pink shade. The branches start from the base of the plant making the individual flower stems extra long. # Maule's Asters

## Giant Asterum

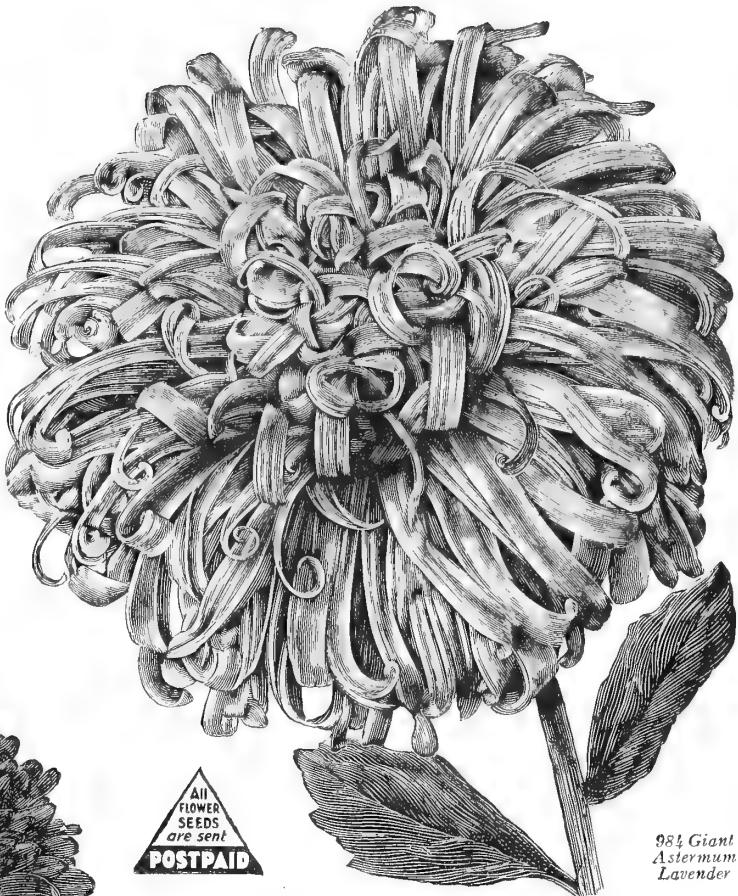

These Asters are extremely popular with many gardeners. The blooms are not only extremely large but they are heavy, well rounded, and supported by fine long and strong stems. The name Asterum refers to the similarity of the elegantly formed blooms to those of a choice Japanese Chrysanthemum. The individual petals of Asterums are long, narrow, and artistically curled and twisted, which gives the blooms particular charm and grace. Giant Asterum Asters bloom during midseason and form strong growing, well branched plants 2 to 2½ ft. tall. The branches start from the base, each ending in a large flower on a long stem which gives them their value for cutting. The individual blooms measure 4 in. across, are of splendid form, and hold their color nicely.

## American Beauty

This is a magnificent true American strain of Asters which excels all others in vigorous habit, size of bloom, free blooming character, and sturdy growth. They are a mid-season type which will continue to flower freely until cut down by frost. The plants grow 2 to 2½ ft. tall and make a graceful, round, well branched bush. Due to the fact that the stems all start near the base of the plants, the flowers are extremely long stemmed, which gives them particular value for cutting. The blooms are well rounded and always fully double. They are made up of broad incurved petals gracefully arranged in an orderly but by no means stiff arrangement.

# Maule's Giant Pansies

## Pansies for Profit

Pansies are the most profitable flowers for market. They are easy to grow, and easy to sell in cities or small towns. Why not plan to grow them for sale next spring?

For spring-flowering plants sow Pansy seed in late July and August, choosing a partially shaded place, and a deeply prepared, well manured soil. The seed bed must be kept moist at all times. Covering it with paper or cloth until the seed germinates will help. Transplant the seedlings when they are large enough to handle. Pansies are hardy and will live over winter without a frame. Mulch the plants with straw, hay, or leaves after the ground has frozen.

Remember that the Pansy plants with the largest flowers command the highest prices; so select a large-flowering variety. You cannot go wrong with Maule's Pansies—they are our greatest flower specialty.

Phenomenal

### 1600 Maule's Giant Phenomenal

This lovely mixture has not lost its appeal ever since we introduced it to the American public years ago. We have continually improved upon it, and thousands of our friends now know and greatly admire these lovely flowers. The strain originated in France, and consists of only the largest, choicest, and most "phenomenal" specimens that could be selected. Phenomenal Pansies come in a wide range of most exquisite colors and color combinations, including those captivating wine-red shades so rare among Pansies. Many exquisitely ruffled flowers will also be found in a bed of this choice mixture. We urge everyone to include a packet or two in his order. Pkt. 15c;  $\frac{1}{16}$  oz. 40c;  $\frac{1}{8}$  oz. 70c.

### 1594 Oregon Giants

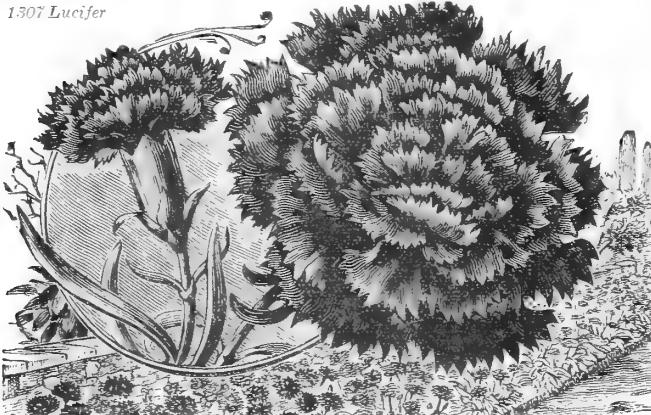

As implied in the name, this strain is of American origin. It has truly giant flowers of a size heretofore unknown in Pansies. The fine, broad petals are somewhat more flattened than those of most other strains, which accounts for the large size of the blooms. Many flower lovers with smaller gardens give preference to mixtures over separate colors. To meet with their wishes we have prepared a mixture which we know is up to the Maule standard. The colors included are those offered here as separate varieties, besides some others—all charming and desirable—to make a blend that cannot be outdone by any other mixture of Dahlia-Flowered Zinnias. They are carried on long stems on massive plants, and are borne continuously from midsummer until frost. The plants are  $3\frac{1}{2}$  ft. tall and fully as broad. The colors found in this type are gorgeous. They include many magnificent shades ranging from pure white, through yellow, old gold, lavender, pink, rose, salmon, and orange, to deep crimson.

The characteristics of this fine type of Zinnia are full, round, double flowers of perfect form and large size, measuring often 5 in. across. They are borne abundantly on long, strong stems. The loosely placed, overlapping petals make a flower of distinctive flat form and graceful appearance. The well branched plants are of robust, bushy growth. They average 3 ft. in height. The color assortment is quite remarkable, including white and many fine shades ranging from yellow, pink, and scarlet to deep purple with the rich colors predominating. A general favorite enjoying a wide popularity. Very desirable for garden use, and especially fine for cutting. We offer a fine list of separate colors, as well as an unequalled mixture.

# Beautiful Hardy Lilies and Other Bulbs

Lilies are easy to grow in any average garden soil. They require good drainage and will live for many years as they are hardy and permanent. The varieties which we list are particularly showy and vigorous. It is important, however, that you follow the suggestions given as to the depth of planting to insure a fine display of flowers for many years to come. We offer sound, well graded bulbs of large blooming size, though some of the varieties have smaller bulbs than others. All are guaranteed to give satisfaction.

## 72B26 Golden Banded Lily of Japan

(*Aurantium platyphyllum*) This is a great favorite of all gardeners. It is a wonderful variety, first found on sacred Mt. Fuji in Japan. It has large white flowers attractively splashed with bright crimson. The beauty of the flowers is enhanced by a broad golden band running through the midrib of each flower petal. It blooms from July until September and will grow from 3 to 6 ft. tall. Cover the bulb with 12 in. of fine soil. Does well in sun or in semi shade. Needs perfect drainage and cannot stand manure or lime. Place the bulb upon a handful of sand and mix a little leaf mold with the soil used in covering the bulb. Delightfully fragrant. 40c each; 3 for \$1.10; 6 for \$2.00.

## 72B25 Leopard Lily

(*Pardalinum*) This Lily has small bulbs produced in clusters and creeping under ground. Cover the bulbs about 5 in. deep and be sure they are planted above the water line. The plants grow 3 to 7 ft. tall and bloom during June and July. They have bright yellow petals attractively spotted with purple and tipped with orange-scarlet. It requires a sunny position and cannot endure lime. Plant it in rich, heavy loam soil to which has been added leaf mold or peat moss. A western variety. 30c each; 3 for 80c; 6 for \$1.50.

## 72B35 Yellow Japanese Lily

(*Hansoni*) This is also called Japanese Turk's Cap Lily. It was brought to us from Korea. The plants grow 3 to 5 ft. tall and bloom during June. The Yellow Japanese Lily is, therefore, one of the earliest to flower. Cover the bulb 8 to 10 in. deep with moderately heavy garden loam. It seems to be indifferent toward lime. The flowers are bright orange attractively spotted with brown. This splendid Lily looks exceedingly well planted in the foreground of Rhododendrons or amid Azaleas where it receives a little shade and is protected against wind and storms. 40c each; 3 for \$1.10; 6 for \$2.00.

## Gloxinia

71B24 Mixed Colors Large bell-shaped flowers in many fine colors. Plant the bulbs in rich soil. Provide proper drainage and keep evenly moist. A splendid pot-plant. 30c each; 3 for 80c; 12 for \$3.00.

## Hyacinthus

71B60 Candicans Stately flower spikes, 3 to 4 ft. tall, bearing from 20 to 30 large creamy-white bell-shaped blooms. The plants produce flowers all during the summer. 20c each; 3 for 50c; 12 for \$1.75.

## Ismene—Peruvian Daffodil

72B66 Calathina Showy white Amaryllis-like blooms produced freely during the summer. They are fragrant and of artistic appearance. The bulbs should be planted in the spring after all danger of frost is past. 25c each; 3 for 70c; 12 for \$2.50.

72B32 Regal Lily

72B26 Golden Banded Lily of Japan

## 72B27 Coral Lily

(*Tenuifolium*) A graceful variety often planted in the rock garden. Grows 18 in. tall and flowers during June. Has bright orange-scarlet blooms spotted with mahogany red. Cover the bulbs with 7 in. of fine loamy soil. Plant in partial shade or in the woodland garden. Can be grown in any light soil. It looks particularly lovely planted with ferns. 30c each; 3 for 80c; 6 for \$1.50.

## 72B33 Crimson Show Lily

(*Speciosum Melponeme*) A magnificent, large flowered Lily with rich carmine-crimson flowers spotted with mahogany-red, and edged with white. Grows 2 to 3 ft. tall and does well in either partial shade or full sunshine. Cover the bulb 10 in. deep with sandy soil. Easy to grow, flowering profusely during August and September. This is a native of Korea. Also forced for winter blooming. 40c each; 3 for \$1.10; 6 for \$2.00.

## 72B28 Double Tiger Lily

(*Tigrinum flore pleno*) This is a showy double flowering Lily with large blooms of a rich bright orange color with purplish black spots. The plants grow 3 to 4 ft. tall and give a splendid display during August and September. Cover the bulbs 8 to 10 in. deep with moderately rich soil. They do well in full sunshine but will also stand a little shade. 20c each; 3 for 55c; 6 for \$1.00.

## 72B40 Giant Tiger Lily

(*Tigrinum fortunei giganteum*) Few other Lilies are as well known and as widely grown as this stately variety. The plants grow 4 ft. tall and make a fine display during August and September. Cover the bulbs with 8 to 10 in. of rich soil and plant them in a sunny position with some low growing plants covering the ground around them. They are rich orange and have purple spots. Exceedingly easy to grow and very hardy. 20c each; 3 for 55c; 6 for \$1.00.

## 72B32 Regal Lily

(*Regale*) A new Lily brought to us from the mountains of Tibet in China. The large, wide open blooms are pure white inside and have a yellow throat. The outside is marked with rose. Grows 3 to 5 ft. tall and flowers during June and July. Cover the bulbs 10 in. deep with sandy soil mixed with a small quantity of coal ashes. 30c each; 3 for 85c; 6 for \$1.50.

## 72B58 Water Lily

(*Nymphaea*) This is the popular white pond Lily which is so easy to grow and perfectly hardy in all ponds which do not freeze through and through. 30c each; 3 for \$1.35; 6 for \$2.50; 12 for \$4.75.

## Zephyranthes Atamasco or Fairy Lily

Large blooms borne on stems 8 to 10 in. long. Fine for the garden or as a pot plant. Not hardy.

70B16 White Large, funnel-shaped, white flowers 10c each; 3 for 25c; 6 for 45c; 12 for 60c.

## 74B18 Dwarf Pearl

The plants grow 25 to 30 in. tall and have fine long spikes closely set with richly fragrant, creamy white blooms which resemble a small Gardenia in form and texture. The flowers are closely arranged on a stout stem which is excellent for cutting. As Tuberose bulbs are not hardy, plant them after all danger of frost has passed and cover the bulbs with about 2 in. of fine soil. 10c each; 3 for 25c; 6 for 45c; 12 for 75c.

## 886 Maule's "Steep Slope" Lawn Grass Mixture

A Lasting Grass, Specially Adapted for Embankments and Terraces

In order to establish a good sod on slopes, embankments, and terraces it is most essential that the grasses sown are deep rooting in order to hold the soil in place. This mixture has been compounded with this point in view. It contains only typical lawn grasses which have long, spreading root growth and will withstand considerable heat and dry weather. To prevent washing after the seed is sown, cover the bank with burlap or cloth until the young seedlings have taken hold of the soil. 1/2 lb. 30c; 1 lb. 50c; 2 lbs. 90c; 5 lbs. \$2.00; 10 lbs. \$3.75, postpaid.

## 885 Maule's "Shady Lawn" Grass Mixture

Flourishes under Trees or in Shady Nooks

Nothing spoils the good effect of an otherwise fine green lawn than bare spots in shaded corners or under trees. Using this grass mixture will help you considerably to do away with these unsightly sections as the grasses we have included in this mixture are naturally adapted for growing in semi-shaded positions. Proper preparation of the soil, an ample supply of plant food, and regular watering may be needed if natural rains do not reach the shaded spots in abundance.

## 887 Maule's "Sunny South" Grass Mixture

Especially Suited to Hot Climates

This mixture is adapted to our southern states where the ordinary lawn grass mixtures will not succeed sufficiently well to provide an even, smooth, rich green lawn. It is suited for growing in the South only as it contains southern grasses that will give a good sod even during the hot summer weather provided the lawn is watered liberally. 1/2 lb. 25c; 1 lb. 35c; 2 lbs. 65c; 5 lbs. \$1.50; 10 lbs. \$2.75, postpaid. ## 797 White Dutch Clover

Gardeners who prefer an extra-heavy growth of clover in their lawn should add this at the rate of 4 ounces to every 2 pounds of grass seed. Sow separately in order to effect an even distribution as clover seed is much heavier than grass seed. Postpaid: Pkt. 15c; 1/4 lb. 25c; 1 lb. 65c; 2 lbs. \$1.20; 5 lbs. \$2.85 10 lbs. \$5.50.
